FINAL PROJECT GUIDELINES

Program	Undergraduate - Major: International Business Management	
Course	**DBB43005 – Digital Innovation and Transformation**	
Assignment title	**Final Group Project**	**Weighting in Final Grade:** 50%
Academic Year	2026 – 2027, Semester 1	
Lecturer	Dr. Đặng Trung Thành	

Assignment brief

Project Overview

The final group project requires students to prepare an evidence-based digital transformation strategy and a feasible implementation plan for a real organization, business unit, public organization, social enterprise, or well-defined business scenario. The project begins with a significant business problem or strategic opportunity, identifies a priority transformation domain, and recommends a coherent portfolio of digital initiatives linked to measurable user, operational, and business outcomes.

The project follows the text book and critically adapts six mutually reinforcing enterprise capabilities: a business-led transformation roadmap, a digital talent bench, a new operating model, a distributed technology environment, data embedded throughout the organization, and adoption and enterprise scaling. The team must adapt these capabilities to the organization's industry, maturity, resources, regulatory context, and risk profile rather than applying the framework mechanically.

Objectives

- Assess the impact of technological developments on an organization or industry.
- Propose an innovative and feasible digital solution linked to measurable business value.
- Apply digital strategy, Agile practices, and organizational change principles.
- Critically evaluate relevant success and failure cases and use credible evidence to justify decisions.
- Work effectively in a cross-functional team and demonstrate traceable individual contributions.
- Produce a professional report, implementation roadmap, project artifacts, and executive presentation.

Project Components

1. Executive Summary: Summarize the organization, priority domain, transformation problem, recommendation, value, implementation path, major risks, and decision request.

2. Organization, Industry, and Technology Context: Describe the organization, customers, value proposition, industry pressures, stakeholders, and relevant technologies. Evaluate

realistic capabilities, feasibility, ethical implications, security, privacy, regulation, and major risks.

3. Current-state Diagnosis and Priority-domain Selection: Use evidence to analyze current journeys, processes, performance, maturity, and capability gaps. Map candidate business domains, apply consistent value–feasibility criteria, and justify one priority domain.

4. Transformation Vision, Value Logic, and Solution Portfolio: Define the future-state vision, measurable objectives, user and business needs, value drivers, solution concepts, use cases, assumptions, dependencies, and prioritization. Include an initial business case.

5. Agile Digital Product and Delivery Model: Define the digital product, Product Goal, MVP, Product Backlog, user stories, acceptance criteria, and initial Sprint plan. Specify the Agile pod, roles, capacity, decision rights, product–platform interfaces, operating model, portfolio governance, funding, and sourcing choices.

6. Data, AI, Technology Architecture, and Digital Trust: Specify data requirements, readiness, quality, ownership, governance, analytics or AI use cases, conceptual technology architecture, nonfunctional requirements, environments, build–buy–partner decisions, cybersecurity, privacy, resilience, trust controls, and residual risks.

7. Change, Adoption, Talent, and Culture: Assess change impacts, stakeholders, readiness, and resistance. Provide communication, training, support, talent, capability-building, culture, reinforcement, and adoption-measurement actions.

8. Implementation, Scaling, Performance, and Governance: Provide an implementation roadmap with phases, parallel lanes, dependencies, milestones, exit criteria, resources, owners, governance, unit of scale, reusable assets, readiness criteria, scaling waves, economics, value-driver tree, KPIs, benefit owners, stage gates, and final risk register.

9. Critical Evaluation and Lessons: Use relevant transformation cases and credible evidence to assess strategic choices, alternatives, trade-offs, assumptions, limitations, failure risks, and contextual boundaries. Explain how case lessons changed the final proposal.

10. Conclusion and Decision Request: State the recommended decision, conditions for proceeding, next stage, evidence still required, and circumstances that would trigger revision, pause, or termination.

Deliverables

1. Final group report in PDF format.
2. Presentation slides in PDF format.
3. Group contribution and peer-evaluation form acknowledged by all members.
4. Supporting evidence and files with confidential and personal data removed.

Report and presentation specifications:

- Recommended report length: 6,000–8,000 words, excluding cover, contents, references, and appendices.
- Formatting: Times New Roman, 13-point; 1.5 line spacing; justified; left margin 3 cm; other margins 2 cm, unless the LMS provides an updated template.
- Referencing: Harvard style used consistently for text, data, figures, frameworks, and AI-assisted material.

- Final presentation: 15 minutes, followed by approximately 15 minutes of questions and defense.
- Every member must present a meaningful part and must be prepared to answer questions across the full project.
- File naming: DBB43005_GroupName_MilestoneOrFileType. Submit through the LMS by the announced deadlines.

Note:

The Project *must* be your own group original work and not copied by or from another student or books etc. If you use ideas, quotes, or data from books, journals, or other sources, you must note the reference of your sources using the Havard style. Make sure that you know how to reference properly, and that you understand the regulations of plagiarism.

Assessment Criteria

Progress Reports 1–5 (10%)

Project Implementation (20%)

Final Report, Presentation and Defense (20%)

Group Coordination and Peer Evaluation

All group members must discuss and collectively agree on the **peer evaluation** scores. The distribution of tasks and responsibilities among group members must be **fair and balanced**, and it should be clearly outlined in the evaluation form.

Note: You are being evaluated on both the **quality and quantity** of your deliverables. The instructions above communicate the minimum requirements for a satisfactory evaluation. To achieve an **excellent or outstanding** grade, you are expected to exceed these minimum expectations.
