SESSION 3

# Digital Diagnosis and Transformation Domain Selection

Week 3 of the approved 12-week syllabus

**Current-state analysis • Domain identification • Domain prioritization**

DBB43005 • 4 hours

# Week 3 scope in the 12-week course

The output becomes the input to Week 4: Digital Strategy and Transformation Roadmap

**1**

## Current-state analysis

Understand performance, journeys, causes, and capability constraints

**2**

## Transformation domain identification

Map end-to-end business domains and define candidate boundaries

**3**

## Domain prioritization

Compare candidates and select one defensible priority domain

**WEEK 4**
**Strategy & roadmap**

**Current-state analysis** | Domain identification | Domain prioritization | Workshop & checkpoint

# Learning outcomes

By the end of Session 3, students should be able to...

| | | | |
|---|---|---|---|
| 01 | **Analyze** | current-state performance using quantitative, qualitative, and process evidence | CLO1, CLO4 |
| 02 | **Distinguish** | symptoms, root causes, business impacts, and capability gaps | CLO1, CLO4 |
| 03 | **Map** | the organization into end-to-end business domains | CLO1, CLO5 |
| 04 | **Define** | useful boundaries for candidate transformation domains | CLO1, CLO5 |
| 05 | **Prioritize** | candidate domains using value and feasibility | CLO1, CLO4 |
| 06 | **Present** | an initial digital transformation diagnosis | CLO4, CLO5 |

**Current-state analysis** | Domain identification | Domain prioritization | Workshop & checkpoint

01

# Current-state analysis

Understand what is happening now and why

# What digital diagnosis is

A structured explanation of performance, causes, and capability constraints

### Observe

What customers, employees, and operations experience

### Explain

Why symptoms persist across process, data, technology, roles, governance, and adoption

### Focus

Where coordinated change can create meaningful business value

Current-state analysis | Domain identification | Domain prioritization | Workshop & checkpoint

# Build a current-state evidence base

Triangulate evidence before asserting causes

### Performance evidence

Cycle time, cost, errors, conversion, service levels

### Customer and user evidence

Interviews, complaints, observation, abandonment

### Process evidence

Queues, handoffs, rework, exceptions, control points

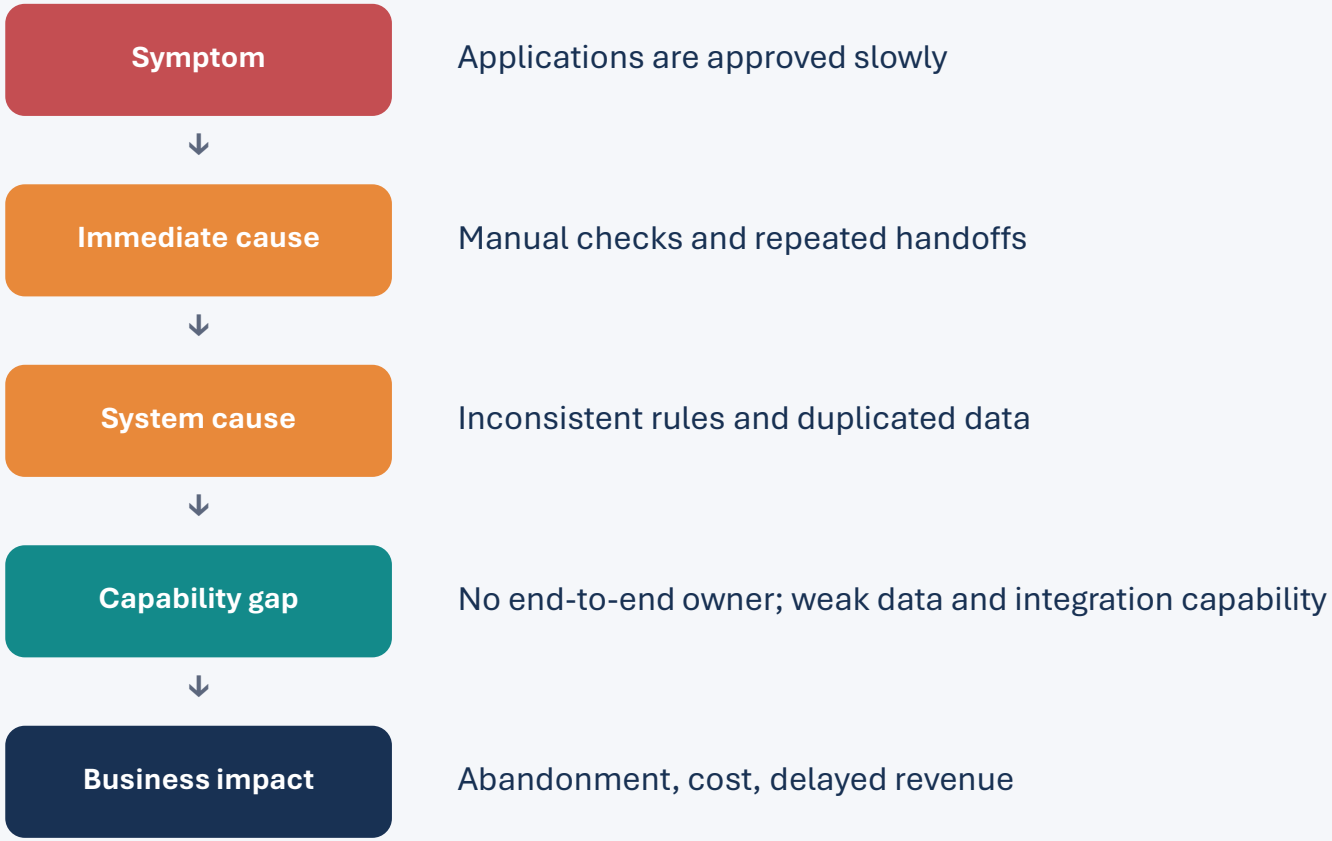

### Capability evidence

Ownership, skills, data quality, architecture, adoption

**Evidence quality: source • date • scope • baseline • reliability • owner**

# Symptoms are not root causes

Move from observations to system explanations

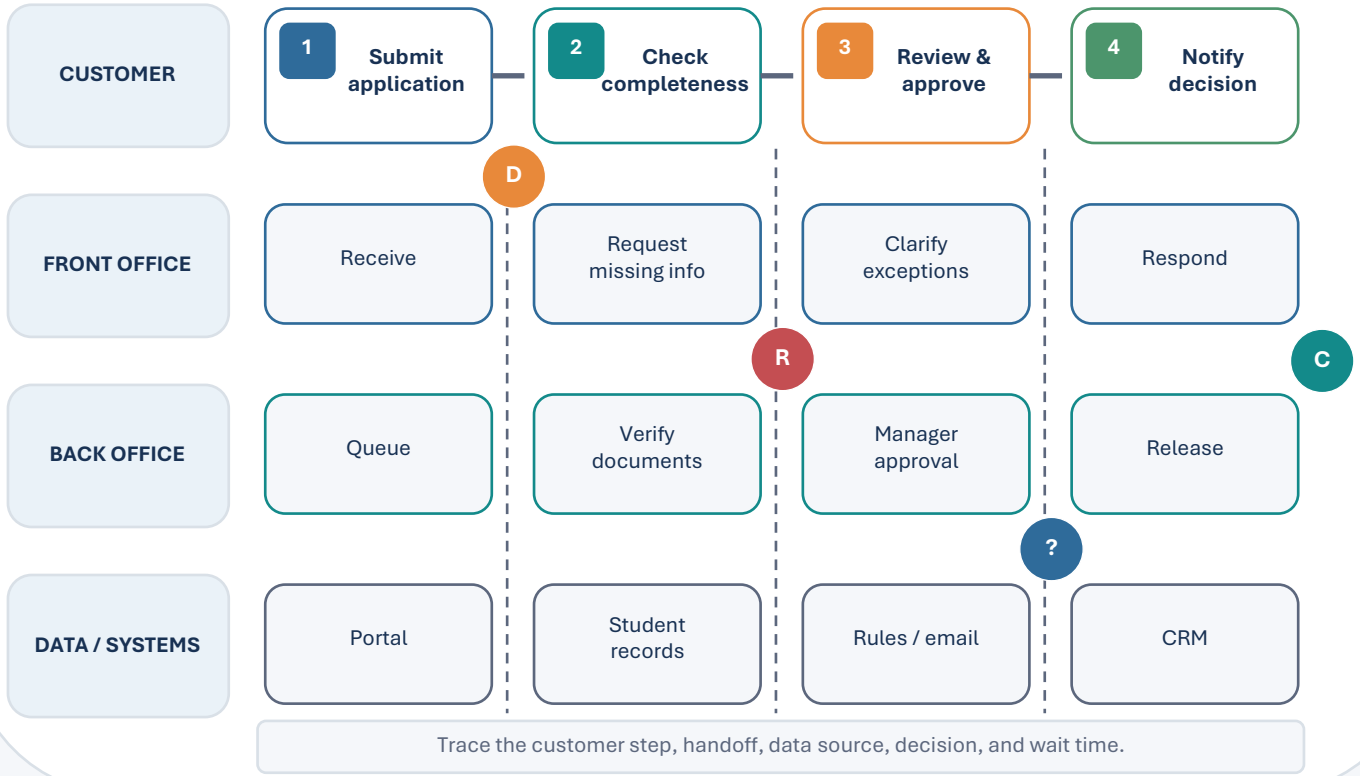

Current-state analysis | Domain identification | Domain prioritization | Workshop & checkpoint

# Map the current journey and handoffs

Look for delay, duplication, uncertainty, rework, and local optimization

## EXAMPLE: CURRENT STUDENT APPLICATION JOURNEY

## DIAGNOSTIC QUESTIONS

1 **DELAY**

**Where does work wait?**

Queues • approvals • missing information

2 **REWORK**

**Where is work repeated?**

Re-entry • corrections • duplicate checks

3 **DECISION FRICTION**

**Where is judgment blocked?**

Unclear rules • authority • data

4 **CUSTOMER FRICTION**

**Where does the journey break?**

Extra effort • uncertainty • channel breaks

**For each issue: evidence • owner • KPI impact**

**Current-state analysis** | **Domain identification** | **Domain prioritization** | **Workshop & checkpoint**

# Activity 1 — Current-state evidence map

Diagnose one visible problem before proposing a solution

**1**

**Choose one problem**

3 min

**2**

**List available evidence**

5 min

**3**

**Separate symptoms and causes**

7 min

**4**

**Identify missing evidence**

5 min

**5**

**Share one insight**

1 min/team

**Rule: every cause must be linked to evidence or explicitly marked as a hypothesis.**

02

# Transformation domain identification

Define the right end-to-end unit of change

# What is a transformation domain?

An end-to-end set of activities that produces a meaningful business outcome

**Trigger → activities and decisions across functions → measurable outcome**

### Large enough

Meaningful value

### Focused enough

Manageable scope

### Cross-functional

End-to-end handoffs

### Outcome-defined

Business KPIs

### Reusable

Related use cases

Examples: customer onboarding • order fulfillment • fraud management • student recruitment • maintenance

# Domain boundary canvas

Make candidate domains explicit and comparable

## Beneficiary

Who receives value?

## Start event

What triggers the domain?

## End outcome

What marks completion?

## Core activities

Which steps and decisions belong inside?

## Exclusions

What is deliberately outside?

## Measures

Which outcome, operational, and adoption metrics?

# Identify the organization’s domain portfolio

Map outcomes, not the organization chart

- Win customers
- **Onboard customers**
- Deliver products
- Serve and retain
- Manage workforce
- Manage risk

*Candidate domains should have clear beneficiaries, boundaries, and outcomes.*

# Activity 2 — Business-domain mapping

Translate departments and processes into outcome-producing domains

### A. List major value streams

5 min

### B. Combine related activities into domains

8 min

### C. Name each domain with an action and outcome

5 min

### D. Shortlist three candidates

5 min

Current-state analysis | **Domain identification** | Domain prioritization | Workshop & checkpoint

# Current-state capability assessment

Assess gaps that explain performance in each candidate domain

### Roadmap

Priorities and value ownership

### Talent

Skills and internal capability

### Operating model

Cross-functional teams and decisions

### Technology

Modular, secure, scalable delivery

### Data

Trusted and reusable data products

### Adoption

Changed behavior and scaled impact

**Rate capability relative to the candidate domain, not as a generic enterprise score.**

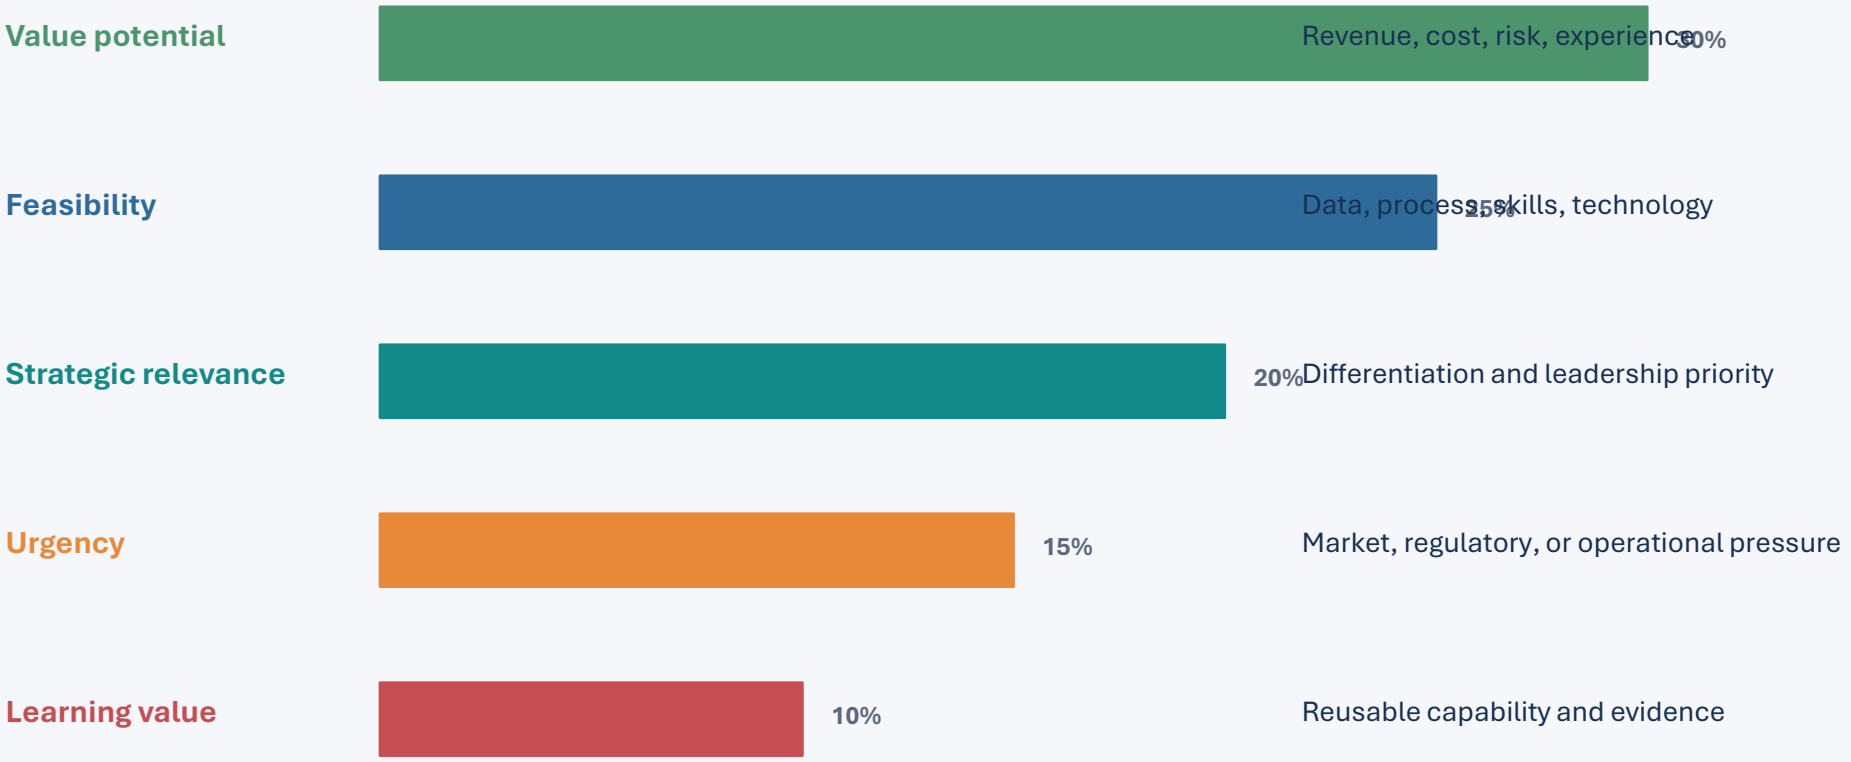

03

# Transformation domain prioritization

Compare value, feasibility, and strategic relevance

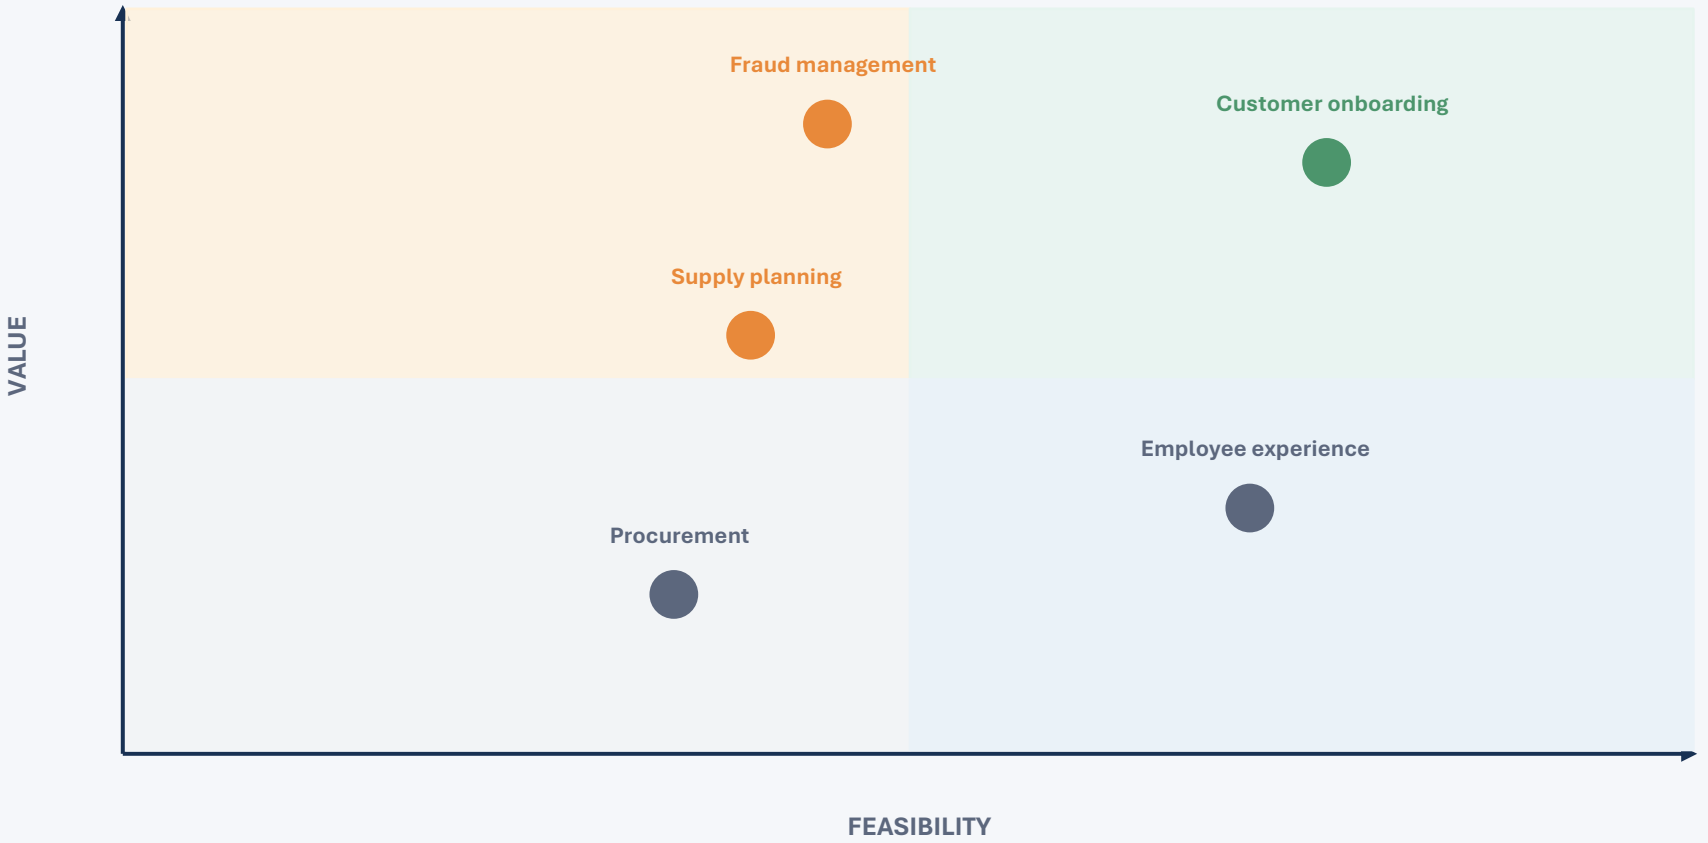

# Prioritization criteria

Make assumptions and trade-offs visible

# Value–feasibility matrix

Use a portfolio view to compare candidate domains

**Prioritize**

High value, feasible enough

**Prepare**

High value, capability gaps

**Monitor**

Lower value or urgency

# Candidate-domain comparison

Scores structure debate; they do not replace judgment

| Candidate domain | Value | Feasibility | Strategic fit | Recommendation |
|---|---|---|---|---|
| **Customer onboarding** | **4.7** | **3.6** | **4.8** | **Prioritize** |
| **Supply planning** | 4.1 | 2.8 | 4.0 | Prepare foundations |
| **Employee experience** | 3.2 | 4.2 | 3.1 | Quick win |
| **Fraud management** | 4.5 | 2.5 | 4.4 | Targeted pilot |
| **Procurement** | 2.8 | 3.8 | 2.7 | Monitor |

## Decision checks

- Causal logic
- Boundary quality
- Dependency load
- Adoption reality
- Evidence access

# Integrated workshop — Select the priority domain

Combine the three Week 3 components

1 **Current-state analysis** Evidence, symptoms, causes

2 **Domain identification** Map 6–10; shortlist three

3 **Capability assessment** Rate gaps for each candidate

4 **Domain prioritization** Compare value and feasibility

5 **Recommendation** Choose and defend one

**30 minutes + 3-minute executive pitch**

Current-state analysis | Domain identification | Domain prioritization | Workshop & checkpoint

# Progress Report 1 — Initial digital transformation diagnosis

Required Week 3 project artifacts

**A** Current-state problem and evidence

**B** Current journey or process map

**C** Organization business-domain map

**D** Three candidate domain canvases

**E** Capability-gap assessment

**F** Value–feasibility matrix

**G** Priority-domain recommendation

**H** Evidence gaps and next actions

**Assessment focus: evidence quality • causal reasoning • domain definition • defensible prioritization**

Current-state analysis | Domain identification | Domain prioritization | **Workshop & checkpoint**

# Initial diagnosis pitch

A six-part executive story

### 1. Strategic pressure

What changed and why now?

### 2. Current-state problem

Who experiences what problem?

### 3. Evidence

What proves the problem is real?

### 4. Root causes

Which system and capability gaps explain it?

### 5. Priority domain

Why this domain over alternatives?

### 6. Next step

What should Week 4 investigate?

Current-state analysis | Domain identification | Domain prioritization | **Workshop & checkpoint**

# Knowledge check

Answer individually, then compare reasoning in pairs

**Q1** Why is a maturity score not a diagnosis?

**Q2** What makes evidence credible enough to support a cause?

**Q3** How is a transformation domain different from a department?

**Q4** What makes a domain boundary useful?

**Q5** Why assess capabilities relative to a candidate domain?

**Q6** Which criteria should shape domain prioritization?

**Q7** Why show the strongest rejected alternative?

**Q8** What should Week 4 build on from this diagnosis?

# Session synthesis

Three Week 3 questions and six principles

**1** **What is happening now?**

Current-state analysis

**2** **Where should transformation focus?**

Domain identification

**3** **Why this domain first?**

Domain prioritization

1. Use evidence before solutions.
2. Separate symptoms, causes, gaps, and impact.
3. Define domains end to end.
4. Assess capabilities relative to the domain.
5. Make value–feasibility trade-offs visible.
6. End with a defensible recommendation.

Current-state analysis | Domain identification | Domain prioritization | **Workshop & checkpoint**

# Preparation for Session 4

Digital Strategy and Transformation Roadmap

## PROJECT ACTIONS

- ✓ Refine the selected domain boundary
- ✓ Validate baselines and evidence gaps
- ✓ Bring the domain map and capability gaps
- ✓ Prepare a one-sentence diagnosis

## READING & THINKING

- Read Rewired Chapters 1, 3, and 6
- Identify two potential value levers
- Draft an initial transformation vision
- Do not choose solutions before clarifying value

Current-state analysis | Domain identification | Domain prioritization | **Workshop & checkpoint**
